

CAMP ARCADIA'S GREEN INITIATIVE

Camp Arcadia is committed to preserving the natural resources we have on our 365 acre property as well as those of beautiful Pleasant Lake.

At Camp, we are in the midst of preserving our hillside, field and trees. Short and long term preservation of our natural resources are on-going goals to which everyone at Arcadia is exposed.

We are also involved in our community's conservation efforts and have been active in the local lake association whose mission is to keep Pleasant Lake free of pesticides, pollution and invasive milfoil.

At Arcadia we use energy efficient light sources, chemical free cleaners and have developed a compost system. We are continually fostering awareness of natural preservation among the campers and staff.

We ask all members of the Arcadian community to help in this effort by recycling, saving water, turning off lights when not needed and helping us build our organic herb and vegetable garden.

We hope our efforts will allow future generations of Arcadians to continue to enjoy swimming in a clean lake and to be able to gaze at the stars in a pollution free sky as we do now.

We hope our efforts will inspire others to continue caring for not only Camp Arcadia but for any place they live in the world.
